

Technical sheet

Misses Flower Power is a decidedly “oversized” vase. The quest for visually striking chromatic effects led to the development of a production technique that brings life to a semi-transparent and irregular surface to produce a vintage glass look.

The technology used—rotational moulding—first applied to transparent polycarbonate, produces a single hollow piece, which is suitable for containing soil, water, plants or flowers.

The round base, the same colour as the structure, gives the vase excellent stability.

This extra-large vase is also available in a polyethylene opaque colour version.
