

X3 Chair  
Marco Maran

**X3 CHAIR** Marco Maran achieves sculptural transparency in X3, an imaginative collection suited to both home and public spaces. Pioneering technology and materials, X3 is constructed of clear polycarbonate with a Desmopan® lattice and uses a complex molding technology applied for the first time in furniture. The chair's undulating profile and striking palette of glowing colors, punctuated by the structural grid, energize any environment. The result: a deceptively simple geometry that conveys a highly graphic effect.

**MARCO MARAN** Marco Maran is celebrated for designs that are light in spirit and flexible in application. Trained as an architect and industrial designer, he has already been the recipient of several design awards. He was voted Best Young Designer for the Sinue chair, which was introduced in 1996. In 1997, he won a Product Design Achievement Award from the IIDA for the Scoop chair, as well as an honorable mention from the same organization for the Bla-Bla-Bla chair. Among his notable completed interiors is the Press Room for the 1998 World Cup in Paris, France.
